Report about biggest challenges, risks and learning outcome.

We think the biggest challenge we faced in this project is not necessarily one that will matter within our future projects this course is trying to prepare us for. The main struggle we had to overcome was the question of how much time we should and how much time we could invest into this project without neglecting our other duties such as working or studying for other classes. Nevertheless, did we quickly realize that this project is much different from the rest. We got to build something from scratch and it was fun to see oneself get more invested and also to learn a lot, not just about programming but also about working together with other people, as the project grew into something we could be proud of.

Looking back, we were doubtful that we would be able to finish this project as none of us had any experience in building a website. We were surprised how quickly we were able to learn along the way as the website shaped slowly into something. We think the biggest learning outcome is that one should not be afraid to start such a project just because of one's insecurity about their programming abilities. It may be hard at the beginning but we think that we learned a lot more in this course about programming than in many others although we haven't been taught a single line of code.
